Palliative Care is Supportive Care for those Living with Serious Illness

What is Palliative Care?
Think of Palliative Care as support for those living with a serious, often life-threatening illness. It's NOT HOSPICE. Rather, Palliative Care provides symptom management and support for the physical, emotional, and spiritual issues faced by those living with illness.

Some common illnesses treated by our Palliative Care Team include cancer, kidney disease, chronic obstructive pulmonary disease (COPD), congestive heart failure (CHF), stroke, Parkinson's disease, Alzheimer's disease, dementia, and many others.

Our teams don't replace your current providers, but rather we collaborate with your providers, giving you that extra layer of support, fast response, and help in navigating your care options.

How is Palliative Care Provided?
Physicians, Physician Assistants, Nurse Practitioners, Social Workers, Chaplains, and other specialists who work together with your primary doctor will see you or your loved one in your home, hospital, nursing home, assisted living facility, or one of our out-patient clinics. Palliative Care can be provided regardless of whether or not someone is receiving curative or life-prolonging treatments. It can also be provided at the same time as home health services.

How is Palliative Care Covered?
Payment for Palliative Care is the same as any other medical provider coverage provided by your insurance. Palliative Care is a consultative specialist to your primary care physician and is considered the same as if your primary care physician recommends any specialist. As with any specialist your provider refers you to, your insurance policy will outline co-payments and any other financial obligations you will be responsible for during your consultation. There are options available for patients with a decreased ability to pay for services.

For more information, please contact a member of our Palliative Care Team at (866) 466.9734.

Goals of Palliative Care
- Prevent frequent hospitalizations
- Optimize quality of life for you and your family
- Help you better understand your condition and your care choices
- Empower you and your families in managing complex illnesses
- Provide expert symptom management
- Improve your ability to go through medical treatments
- Allow extra time for communication
- Help in navigating the healthcare system
